

# New Folds for the Arts and Academics

April 5-Aug. 7, 2013

---

Students from New School for the Arts and Academics are combining their math and art skills in the exhibition "New Folds for the Arts and Academics."

This multi-media mathematics and art exhibition features origami sculptural pieces. Students use the art of paper folding (origami) and paper cutting (kirigami) to explore 2- and 3-dimensional forms utilizing concepts found in art and academic disciplines. Students created modular pieces that will be put together to make larger sculptural pieces symbolic to dance, photography, math, fashion, visual arts and creative writing.
