

# How does it work?

## Pedestrian/Bicyclist:

- When you approach the signal, a solid “don’t walk” symbol will be displayed.

- To cross the street, press the button to activate the beacon signal.
- After several seconds, the pedestrian “walk” symbol illuminates.

- When the “walk” symbol is illuminated, you may cross the street while watching for oncoming traffic.
- After the “walk” time is complete, a flashing “don’t walk” symbol will appear and you should finish crossing the street.

- Do not begin to cross the street during the flashing “don’t walk” symbol.
- Once the signal cycle is complete, a solid “don’t walk” symbol is displayed.

## Motorist:

- The beacon signal will flash yellow for several seconds and then change to solid yellow, letting you know that you need to prepare to stop.

- The beacon signal then turns solid red letting you know that you must stop.

- The beacon signal then displays an alternating flashing red light.

- After coming to a complete stop and making sure there are no pedestrians in the crosswalk, you are then allowed to proceed through the crossing even though the beacon signal is flashing red.
- Once the pedestrian is safely through the intersection, the signal will turn off. You may then proceed through the crossing without stopping.
