ACTION: Request for a Use Permit to allow Tandem Parking and a Development Plan Review consisting of a new 33 unit multi-family development for JENTILLY LANE CONDOMINIUMS, located at 1717 South Jen Tilly Lane. The applicant is Trapezium Consulting.

FISCAL IMPACT: There is no fiscal impact on City funds.

RECOMMENDATION: Staff – Approval, subject to conditions

BACKGROUND INFORMATION: Jen Tilly Lane Condominiums (PL130373) is a 33 dwelling unit project located north of Broadway Road and east of Rural Road. The surrounding uses are multi-family residential to the north, residential office to the south and a commercial shopping center to the east. In 2008, the Development Review Commission previously reviewed and approved an identical development on this site which subsequently lapsed after one year with no further activity of the project.

Department Director: Dave Nakagawara, Community Development Director
Legal review by: N/A
Prepared by: Sherri Lesser, Senior Planner
COMMENTS:
The applicant is seeking approval of a thirty-three (33) unit “for sale” condominium townhouse project located east of Rural and North of Broadway Road on Jentilly Lane. The request includes Development Plan Review of the building elevations, site plan, landscape plan and preliminary grading and drainage plan plus a use permit to allow nine (9) of the units to utilize tandem parking.

PUBLIC INPUT
No public input received to date.

PROJECT ANALYSIS

USE PERMIT
The Zoning and Development Code Section 4-602 allows tandem parking, in multi-family zoning districts, subject to a use permit. The unit mix for this development includes nine (9) two bedroom units with tandem parking, twenty (20) three bedroom units and four (4) bedroom units. Of the thirty-three (33) units; the nine (9) two bedroom units will have garages designed to accommodate tandem parking; all other units are designed with garages to accommodate two side by side parking spaces. The number of parking spaces provided within this application is deficient of seven (7) parking spaces. The applicant has provided the minimum number of parking spaces required for the unit count and mix, but neglected to provide for the (.2) per unit on-site guest parking spaces. The applicant may need to revise the mix of units to reduce the number of parking spaces required or provide more parking spaces within the complex. The use permit advertised for this application was not specified with a maximum number of tandem spaces to be provided on the site, therefore an allowance exists to either increase or decrease the number of tandem spaces necessary. The final unit mix and provided parking numbers will be verified within the construction plans as part of the planning plan check.

Evaluating the use permit, the proposal appears to pass the use permit test listed below:

a. Any significant increase in vehicular or pedestrian traffic in adjacent areas;
   - There will be no significant increase in vehicular or pedestrian traffic in adjacent areas.

b. Nuisance arising from the emission of odor, dust, gas, noise, vibration, smoke, heat, or glare at a level exceeding that of ambient conditions;
   - This use, with conditions, should not create nuisances for the surrounding area.

c. Contribution to the deterioration of the neighborhood or to the downgrading of property values which is in conflict with the goals, objectives or policies for rehabilitation, redevelopment or conservation as set forth in the City’s adopted plans, or General Plan;
   - The tandem parking for a portion of the complex will not contribute to neighborhood deterioration or downgrade property values. This use permit request is consistent with the General Plan 2030’s Land Use Element. The requested use permit will not be detrimental to the surrounding area. There are surface parking spaces available on site as well as on the street to mitigate any potential nuisance associated with garage tandem parking.

d. Compatibility with existing surrounding structures and uses;
   - The proposed use appears to be compatible with surrounding uses.

DEVELOPMENT PLAN REVIEW

Site Plan
The site plan layout configures the thirty (33) unit development into four (4) sections of dwellings which front the street; abut the north property line and surround an interior court yard including a pool amenity/recreational area. The three story units feature a front porch entry and individual garages with fourteen (14) on-site surface spaces. A pedestrian paths link the individual units to the street front.

Building Elevations
The proposed development features building elevations designed in the character of traditional neighborhood design with enhanced architectural features at the pedestrian level. The mass of the three story elevations are divided into smaller components which include a front porch with a shade structure over the entries; offsets in the second and third floors; trim to accent windows and upgraded garage doors. The building materials include sand-finished stucco, wood shutters, wrought
iron balconies and concrete tile roof.

**Landscape Plan**
The landscape plan features a palette of low-water use trees and plants which have a rapid growth rate. The placement to the trees will provide shade for the internal pedestrian paths and surface parking areas.

**Section 6-306 D Approval Criteria for Development Plan Review**

1. *Placement, form, and articulation of buildings and structures provide variety in the streetscape;* a row of units front JenTilly Lane; with the front doors of those units accessible from the City sidewalk. It replicates the feeling of a typical residential street facilitates pedestrian access to the site from the public street by a pedestrian walkway between two sets of unit types providing minimal contact with vehicles maneuvering on the site.

2. *Materials are of a superior quality, providing detail appropriate with their location and function while complementing the surroundings;* the proposed materials are compatible with the surroundings.

3. *Buildings, structures, and landscape elements are appropriately scaled, relative to the site and surroundings;* Buildings and landscape elements have proper scale with the site and surroundings. materials are similar to other buildings in the area, but higher quality in the energy efficiency of the building envelope and architectural systems.

4. *Building facades provide architectural detail and interest overall with visibility at street level (in particular, special treatment of windows, entries and walkways with particular attention to proportionality, scale, materials, rhythm, etc.) while responding to varying climatic and contextual conditions;* The buildings are designed with a variety of architectural details to enhance the overall appearance.

5. *Large building masses are sufficiently articulated so as to relieve monotony and create a sense of movement, resulting in a well-defined base and top, featuring an enhanced pedestrian experience at and near street level;* the elevations change within the horizontal plane undulating back and forth between units, articulated by paint differentiation. Large building masses have details that provide for smaller visual components at the pedestrian level. The building design has a distinct base, middle and top, with accent elements, roof forms, and detailing.

6. *Building facades provide architectural detail and interest overall with visibility at street level (in particular, special treatment of windows, entries and walkways with particular attention to proportionality, scale, materials, rhythm, etc.) while responding to varying climatic and contextual conditions;* the building façade uses Spanish style architectural detailing with arched openings over enclosed porches and balconies, tile roof with exposed rafter tails accented with a contrasting color to the tile and stucco.

7. *Plans take into account pleasant and convenient access to multi-modal transportation options and support the potential for transit patronage;* the site is located close to Valley Metro and Orbit Bus lines within the neighborhood and along Rural and Broadway roads.

8. *Vehicular circulation is designed to minimize conflicts with pedestrian access and circulation, and with surrounding residential uses;* the units are designed with pedestrian access on the opposite elevation of the vehicular access into the unit garages minimizing the potential for any conflict.

9. *Plans appropriately integrate Crime Prevention Through Environmental Design principles such as territoriality, natural surveillance, access control, activity support, and maintenance;* the plans provide eyes on the streets and alleyway, utilize appropriate landscape for surveillance of the surrounding area, and will have commonly held and maintained areas.

10. *Landscape accents and provides delineation from parking, buildings, driveways and pathways;* landscape is provided along the two street fronts, and within interior of complex. Landscape areas are located on the alley side, creating a more pleasant “back of house” environment than what most multi-family parking areas provide.
11. *Lighting is compatible with the proposed building and uses, and does not create negative effects;* lighting will comply with code requirements, and will provide more ambient light to the area, increasing safety.

**Conclusion**
Based on the information provided by the applicant and the above analysis, staff recommends approval of the requested Development Plan Review and use permit. This request meets the required criteria upon conformance with the conditions.

**REASONS FOR APPROVAL:**
1. The project meets the General Plan Projected Land Use and the goals and objectives of the plan.
2. The project will meet the development standards required under the Zoning and Development Code.
3. The proposed project meets the approval criteria for a Development Plan Review.
4. The proposed project meets the approval criteria for a Use Permit.

**ZUP14001 CONDITIONS OF APPROVAL**

**EACH NUMBERED ITEM IS A CONDITION OF APPROVAL. DEVELOPMENT REVIEW COMMISSION MAY MODIFY, DELETE OR ADD TO THESE CONDITIONS.**

1. The number of tandem parking spaces approved for this development may be increased or decreased as necessary to reconfigure the unit mix to provide the required number of parking spaces; final details to be reviewed and approved by staff in planning plan check process.

2. If there are any complaints arising from the use permit that are verified by a consensus of the complaining party and the City Attorney’s office, the use permit will be reviewed by city staff to determine the need for a public hearing to re-evaluate the appropriateness of the use permit.

3. Process CCR’s, covenant code and restrictions, for the development which includes language regarding the management of surface parking spaces for guests.

**DPR14004 CONDITIONS OF APPROVAL**

**EACH NUMBERED ITEM IS A CONDITION OF APPROVAL. DEVELOPMENT REVIEW COMMISSION MAY MODIFY, DELETE OR ADD TO THESE CONDITIONS.**

**General**
4. Process a subdivision plat (condominium) and CCR review prior to approval of building permit.

**Site Plan**
5. Provide upgraded paving at entire driveway consisting of clay or concrete unit paving. Detail unit paving to accept weight of emergency vehicles and turn action of full size vehicles maneuvering into the garages and the guest spaces. Provide unit paving of color that contrasts with the uncolored accessible concrete walkway pavement and compliments the color of the buildings. If possible, detail unit pavement to be porous to improve site water retention and potentially reduce heat retention.

6. Updated driveway entrance to be coordinated with the property located to the south in order to maintain access for existing parking spaces.

**Floor Plans**
7. Flexible rooms shown on floor plans of Unit 2 designs shall be counted as bedrooms in the calculation of the required number of parking spaces.
Building Elevations
8. The colors and materials exhibited on the colored elevations are conceptually approved as provided. Submit specific color and material information on construction documents for review during building plan check process. Planning inspection staff will field verify colors and materials during the construction phase.

The main colors and materials shall not exceed light reflectance value of 75 percent.

9. Provide rain gutters to convey water off roof and away from pedestrian walkways and entrances. Roof areas that do not directly affect walkways and entrances are not required to be guttered. Incorporate gutters into elevations and conceal downspouts to enhance the character of the residences.

10. Incorporate lighting, address signs, incidental equipment attachments (alarm klaxons, security cameras, etc.) where exposed into the design of the building elevations so that the architecture is enhanced by these elements.

11. All transformer boxes, meter panels and electrical equipment, backflow valves, and other utility equipment shall be painted to match the adjacent building color.

12. Exposed conduit, piping, etc. is not allowed unless a creative conduit surface design that compliments the architecture is reviewed and approved by the Development Review Commission.

Lighting
13. Design security (dusk to dawn) lighting that enhances the small-scale residential character of Jentilly Lane.
   i. As part of the common area security light package, consider the use of unshielded light sources, such as maximum 50 watt incandescent or equivalent lights in “jelly jar” or similar fixtures.
   ii. Do not install pole lights on site.
   iii. Illuminate the common tract with building mount lights, and if necessary, with bollards.
   iv. Generally, keep security light sources below the height of second floor window sills.

14. Illuminate each residential front entrance and garage door from dusk to dawn as part of the common area security light package.

Landscape
15. Top dress planting areas with a rock or decomposed granite application. Provide rock or decomposed granite of 2” uniform thickness or less. Provide pre-emergence weed control application and do not underlay rock or decomposed granite application with plastic.

CODE / ORDINANCE REQUIREMENTS
THE BULLETED ITEMS REFER TO EXISTING CODE OR ORDINANCE THAT PLANNING STAFF OBSERVES ARE PERTINENT TO YOUR CASE. THE BULLET ITEMS ARE INCLUDED TO ALERT THE DESIGN TEAM AND ASSIST IN OBTAINING A BUILDING PERMIT. THESE ITEMS ARE NOT AN EXHAUSTIVE LIST.

- Specific requirements of the Zoning and Development Code are not listed as a condition of approval, but will apply to any application. To avoid unnecessary review time, and reduce the potential for multiple plan check submittals, it is necessary that the applicant be familiar with the Zoning and Development Code (ZDC), which can be accessed through www.tempe.gov/zoning, or purchased at Community Development.

LENGTH OF APPROVAL
- Your drawings must be submitted to the Community Development Building Safety Division for building permit by February 11, 2015 or Development Plan approval will expire

SITE PLAN REVIEW:
- Verify all comments by the Public Works Department, Community Development Department, and Fire Department given on the Preliminary Site Plan Reviews. If questions arise related to specific comments, they should be directed to the appropriate department, and any necessary modifications coordinated with all concerned parties, prior to application for
building permit. Construction Documents submitted to the Building Safety Department will be reviewed by planning staff to ensure consistency with this Design Review approval prior to issuance of building permits.

PLAT
- A Subdivision/Condominium Plat is required to create the thirty three (33) “for sale” properties. Separately process the Subdivision Plat through City Council. Complete the drawing format to the satisfaction of Community Development and Public Works Departments staffs. After the Plat is approved by City Council and the exhibits are signed, record the subdivision plat with the Maricopa County Recorder’s Office through the Community Development Department.

CC & R
- CC&R: Continuing Care Condition, Covenant and Restriction is required for the features of Jentilly Lane that are held in common, including (but not limited to) maintenance of project’s common area security lighting, domestic water, private sanitary sewer, site water retention system, landscape and landscape watering system, drive aisles, entrance walkway, guest parking spaces, refuse collection and refuse container storage. The CC&R's shall be reviewed and configured in a form satisfactory to Planning Staff and the City Attorney. After the CC&R's are in a satisfactory configuration, they shall be signed, including by the Community Development Director and City Attorney, and shall be recorded with Maricopa County Recorder’s Office through the Community Development Department.

STANDARD DETAILS:
- Tempe Standard “T” details may be accessed through www.tempe.gov/engineering or purchased from the Engineering Division, Public Works Department.

FIRE:
- Fire lanes need to be clearly defined. Ensure that there is at least a 20'-0" horizontal width, and a 14'-0" vertical clearance from the fire lane surface to the underside of tree canopies; or overhead structure, if allowed by Fire Department. Details of fire lane(s) are subject to approval of the Fire Department.

ENGINEERING AND PUBLIC WORKS
- 100 year onsite retention required for this property, coordinate design with requirements of the Engineering Department.
- Refuse container and enclosure to meet design Engineering Department design standards for construction, location, orientation to drive aisle and access (if gated).

LIGHTING:
- Follow requirements of ZDC Part 4 chapter 8
- Follow the guidelines listed under appendix E “Photometric Plan” of the Zoning and Development Code.
- Indicate the location of all exterior light fixtures on the site, landscape (and photometric) plans. Avoid conflicts with lights in order to maintain illumination levels for exterior lighting.
- Indicate locations of accent lighting and security lighting that will be mounted to building or provided in parking areas; provide a photometric plan and cut sheets for fixtures for planning plan check approval.

SIGNS:
- Obtain sign permit for any identification signs.

ADDRESS SIGNS:
- Provide minimum 50 percent contrast between address sign and the underlying surface.
- Direct or Halo illuminate (back light) each address sign. Obtain sign permit for halo illumination of address signs.

HISTORY & FACTS:
March 30, 1988 The existing apartment complex constructed, circa 1967, was destroyed by fire.

November 15, 1988 The Hearing Officer approved a use permit for the Villas to a re-build a nonconforming apartment complex damaged by fire at 1717 S. Jentilly Ln, subject to conditions.
December 21, 1988

The Design Review Board approved building elevations, site plan and landscape plan for The Villas, subject to conditions.

*the use permit expired after one year and the land remained vacant.

March 12, 2008

The Development Review Commission approved a Use permit for tandem parking and a Development Plan Review including building elevations, site plan and landscape plan for JenTilly Lane a 33-unit development, subject to conditions.

*the approval expired after one year and the land remained vacant.

RE: Jenitlly Lane Condominiums Development Plan Letter of Explanation

Dear Chairman and Commissioners

Jenitlly Lane Condominiums is a residential townhome style condominium project located at 1717 S Jenitlly Lane which is northeast of the intersection of Rural Road and Broadway Road. The proposed project consists of 33 3-story units on a 1.47 net acre site. The site density is 22.5 dwelling units per acre. The site is zoned R-4 and allows up to 25 units per acre.

The objective of this project is to provide a high quality urban townhouse style residence community that will be attractive to students, young professionals and active empty nesters. The townhouse style units provide an added sense of privacy compared to “stacked unit” apartments. A Spanish architecture style will be used to produce an attractive project that will enhance the existing neighborhood.

A 20-foot setback will be provided along Jenitlly Lane which will allow space for an enhanced landscape treatment in contrast to the smaller setbacks of the developments to the north and south. The units facing Jenitlly Lane will be divided into a 4-unit building and a 5-unit building to provide variety.

Vehicular access will be provided by an existing entrance driveway shared with the office development to the south. A internal drive will connect to this existing drive and to the existing alley on the east side providing a looped circulation path through the site. Pedestrian walkways will be provided throughout the development to connect the units to the pool amenity and to the sidewalk along Jenitlly Lane.

Generous tree plantings will provide shade for the pedestrian walkways and buildings to help mitigate heat gain, provide comfort and energy conservation. A shade structure will be provided in the pool area.

Building materials will include stucco with wrought iron decorative elements and concrete “S-tile” roofing.

The three story building provide variety amongst the surrounding two story apartments an single story office buildings.

ENVIRONMENTAL • PLANNING • CIVIL DESIGN

7898 E. ACOMA DRIVE, SUITE 100 • SCOTTSDALE, ARIZONA 85260 • (480) 483-1500
The building masses are divided into smaller components by the use of covered entrances, articulations in the building faces and covered balconies.

The building bottoms are defined by covered entrances and architectural detailing and the sloping roof elements, eaves and gables define the top of the buildings.

Windows are featured at all levels and on all sides of the buildings with architectural details such as "pophouts", shutters, wrought iron railings and decorative pipes to provide visual interest and to increase the security of adjacent outdoor spaces by maximizing natural surveillance and visibility.

Arched, covered entrances with wood tone raised panel doors, arched covered balconies, window shutters, wrought iron balcony railings, wrought iron window detailing, and decorative pipe details in gable ends were used to contribute to making the public spaces of this project attractive.

All utilities will be placed underground and any above ground cabinets or enclosures will be painted to match the building colors.

The site public spaces will be adequately lit using building mounted and pole mounted lights. The site lighting will be attractive and will minimize light spillage onto adjacent properties.

All site walkways were been designed to conform to the Americans with Disabilities Act (ADA) and accessible parking in accordance with ADA is provided.

Three pedestrian walkway connections to the sidewalk on Jentilly lane have been provided to allow access to nearby public transporttation routes on Broadway Road and Rural Road.

The site has been designed to minimize pedestrian/vehicular conflicts while still providing good circulation for pedestrians, bicycles and vehicles. Each unit provides two vehicular parking spaces and bicycle storage space in an enclosed garage.

The site design appropriately integrates crime prevention principals such as territoriality by including a view fence along the north property line which defines the limits of the property while allowing natural surveillance. Windows and site lighting are provided on all building sides which further enhances natural surveillance. The pool area will be securely fenced and is centrally located surrounded by buildings. A homeowners association will be created and will provide for excellent maintenance and upkeep of the property.

An attractive landscape design is provided that will accent and separate parking, buildings, driveways and pedestrian walkways.

Sincerely,

Paul I. Rogers, Jr., P.E.
Principal Engineer
NOTES
1. Existing pavement to remain.
2. Existing valley gutter to remain.
3. Pavement to be removed and replaced.
4. New driveways per COT Std Det 320.
5. Colored, stamped asphalt pavement, square tile pattern, color to coordinate with building colors.
7. New fire hydrants.
8. New fire hydrant boxes.
11. New trash enclosure.
13. New concrete driveway.
15. Fire/refuse truck turning radius, 45' outside, 25' inside (typ).
16. Bicycle parking space (typ).
17. Mail Kiosk

PROPOSED USES
Thirty three attached single family 3 story condominium dwelling units in 8 buildings with a pool amenity.

USE PERMITS REQUESTED
Tandem parking spaces in 9 units.

GENERAL PLAN 2030
Residential Land Use
Medium to High Density, up to 25 du/acre.

ZONING
